All the best features of DART with an optimized user experience

HDMS has completely redesigned our robust data analytics platform to deliver a more modern and intuitive user interface providing an optimized experience for our users of all levels.

HDMS's DART platform aggregates and integrates disparate health care data and turns it into powerful, meaningful and actionable intelligence. Our new DART 11 user interface, Analytics View, provides a more user-friendly way to digest the data with intuitive visual pathways and graphical displays, making it easier to manage day-to-day workflow.
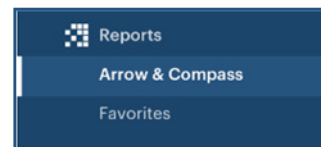

Users will now have the option to toggle between the current user interface and Analytics View as desired.
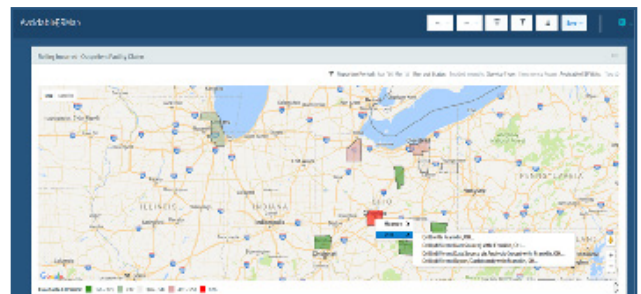

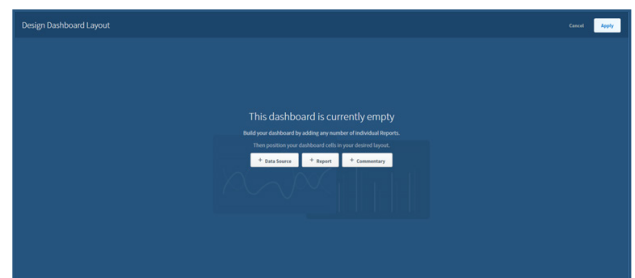

What's New

» **Improved homepage and navigation**

» **Account group reporting access from the navigation pane**
allows quick access to key reports to aid in Account Manager function

» **Power user functionality**
allows informatics users at the health plan to drill to detail data to arrive at actionable insights.

» **Improved dashboard layout**
allows business users to construct output with mixed cell types to display key information.

» **Improved report/chart designs**
shortens and guides the report design workflow, and allows users to intuitively change the report type from a simple table to a variety of chart options.

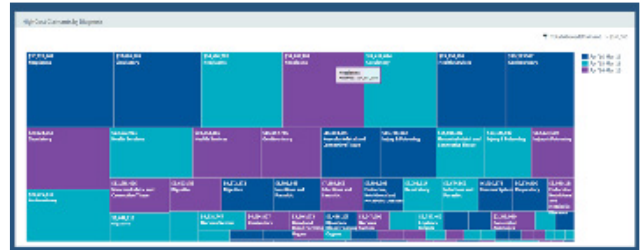

» **Improved dimension/measure selection**
allows users to focus on the appropriate dimensions for their analysis, rather than the multitude of dimension options available

» **Online help**
is integrated for quick access to key concepts, including video guidance. Clients with access to the Learning Management System will have a direct link for ease of navigation.

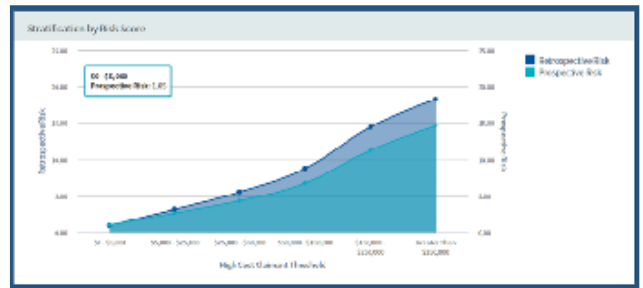

» **Improved exports of reports and dashboards**
to allow for WYSIWYG functionality (What You See Is What You Get).

New Chart Type – Treemap

New Chart Type – Spline

New Chart Type – Spline with Area

New Chart Type – Stepped Line

» **Login notifications**
provide easy access to timely information when a user logs into the application.

» **Single Sign-On**
Eases access for users with a large enterprise
